

# Leading Change Conversations

## What is covered in Leading Change Conversations?

- Learn to use change as an agent of business growth and personal transformation.
- Reframe change as a positive opportunity for you and your team to work differently and to expand their influence and personal development.
- Understand how to respond to complicated change as opposed to complex change.

---

## Who is it for?

This module recognises that there is a difference between the external drivers of change and the internal psychological shifts required for genuine transformation to occur. People don't necessarily avoid change, but they can be resistant to or simply at a loss for what to do in the face of transformation.

---

## What does it offer?

Leaders are often guiding their teams through change or towards new ways of working and relating to processes and other teams. For a leader there is always some sort of change underway, having a toolkit of techniques to deploy with people at different stages in the change cycle will mean leaders have a confidence about their own ability to navigate others through change and transformation.
